This study evaluates the financial performance and financial health of Suba Solution Pvt. Ltd. through financial statement analysis. The research is based on secondary data collected from the company's Profit and Loss statements for the period from 2019 to 2024. Various financial ratios such as the current ratio, net profit ratio, gross profit ratio, operating profit ratio, debt-equity ratio, return on assets, and return on equity were used to analyze the company's financial position. These ratios help to assess the company's liquidity, profitability, and solvency. The analysis provides insights into the efficiency of financial management and the overall financial stability of the organization. The study highlights the importance of financial statement analysis as an effective tool for evaluating business performance and supporting better financial decision-making.
