Abstract

This study analyzes the financial performance of GS SysNet Networking Tech & IT Services, over a period of five years. The analysis focuses on liquidity, profitability, solvency, and operational efficiency using secondary data from financial statements. Financial tools such as ratio analysis and trend analysis were applied to assess the firm's financial position. The findings indicate strong solvency, while liquidity and profitability show fluctuations, highlighting the need for improved working capital and cost control. The study concludes that the company has good growth potential with the adoption of appropriate financial strategies.
